Management Controls, Inc. Announces Marketing Partnership with Access International Inc.

*Customers Offered Automatic Time & Attendance and Workforce Information
Tracking for Proven Cost Savings, Security and Safety Improvements*

DALLAS, TX, February 27, 2008 – [Management Controls, Inc.](#), a leader in automating the processing of service-based contracts, and [Access International Inc.](#) (OTCBB: AXSI), a leading provider of wireless business activity monitoring solutions, today announced an innovative new partnership. Together, the companies will deliver integrated solutions that offer customers direct contract labor cost savings through automatic workforce identification and tracking along with improved facility security, worker safety and real-time monitoring of physical assets. The solutions are based on MCI's market-leading [Track](#)[™] project cost management software combined with Access' [Dot](#)[™] micro-wireless technology for automatic identification, data collection and access control. Access will demonstrate the solutions in booth #704 at the National Safety Council's 2008 Texas Safety Conference & Expo in Houston at the George R. Brown Convention Center in Houston on March 31 and April 1.

Hundreds of millions of dollars are lost each year due to limited workforce cost management data collection and tracking, cumbersome access control, obsolete safety systems and asset loss. The combination of Track software and Access' automated "hands-free" wireless IDs will deliver greater savings as a comprehensive system solution than each system has already proven to deliver independently. With the Track software and Dot wireless access control solutions in place, customers can expect to realize a 10 to 15 percent hard-dollar return on investment within the first six months. Documented savings include a reduction in labor billing costs of 10 to 14 percent, worker productivity improvement of more than 10 percent, a reduction in asset loss ranging between 1 to 4 percent and increased worker safety that has reduced injuries and saved lives.

"Many of our customers require the ability to check people and equipment in and out of their facilities automatically without installing fences, turnstiles or access control hardware," explains [Bob Harrell](#), President of Management Controls, Inc. "We are delighted to partner with Access, a company whose dedication to wireless access control and management complements MCI's commitment to delivering real-time, actionable information about corporate assets."

"Our Control Point Location System architecture is ideal for the kind of high throughput, "hands-free" access control and tracking necessary in the Oil and Gas, Chemical and Utility industries that Management Controls services," stated [Allan Griebenow](#), Access International's CEO and President. "In fact, any industry that relies on

-more-

the use of contractors to provide skilled labor is a prime candidate for the solutions delivered by MCI's Track Software and Access' Dot micro-wireless system."

Access' [Dot Credentials](#) – long range transmission ID badges – do not require visual scanning by guards at the gate or presentation within inches of a reader. This long range capability allows for rapid, highly accurate identity logging at gates and employee entrances that may not have a gate controller, turnstile or some other typical form of access control point. As needed, the IDs are read from the inside of a moving vehicle as the contractors drive into the facility. Once in place, the highly scalable software and hardware solutions include the added benefit of delivering internal worker positioning information to comply with training and safety needs as well as automated emergency evacuation information necessary under OSHA regulations in the case of an incident. The systems sold by MCI and Access also can be integrated with standard access control systems and the existing corporate network where they exist.

MCI and Access will co-market solutions to provide an integrated, efficient system for customers to automate the management and measurement of contractor labor equipment and materials, increase access control security and worker throughput, improve facility safety and reduce asset loss.

About Management Controls, Inc.

[Track](#) software, created by Management Controls, Inc., automates the business processes of service-based contracts – from project time-keeping through invoicing – and delivers actionable information that clients and contractors require to complete projects on-time and on-budget. Track software accurately validates, calculates and compiles the hours and costs of contracted work, providing project status on a shift basis. Using this real-time information, owners and contractors work collaboratively to manage projects more effectively – for their mutual and individual benefit. About Access International Inc.

[Access International Inc.](#) (OTCBB: AXSI) delivers wireless intelligence through real-time business activity monitoring solutions that improve productivity, security and revenue growth. The systems derive wireless intelligence from automatic advanced workforce management, workflow management, asset monitoring and distributed sensing. Its revolutionary and patented [Dot](#) micro-wireless technology platform combines RFID, RTLS and wireless sensing for better decision-making and control throughout the enterprise. Access is a portfolio company of [Amphion Innovations plc](#) (AIM: AMP). For more information on Access, visit www.accessinc.com.
