Access International Introduces Next Wireless ID Worker Safety Feature *Automated Temperature Monitoring Designed for Life Safety*

DALLAS, TX, August 10, 2010 – [Access International Inc.](#) (OTCBB:AXSI), a leader in Wireless ID solutions, today announced the latest in a series of features for improving worker on-the-job safety. The Company's Dot MicroWireless-based IDs have proven their value in enhanced location-based security monitoring, asset protection, workforce optimization and safety capabilities such as "man-down" condition monitoring. The safety capabilities have now been augmented to constantly monitor the ambient temperature in the workplace and automatically alert to dangerous temperature conditions. This feature adds to the capabilities sought in oil/gas and grain elevator operations in particular. The U.S. Occupational Safety and Health Administration recently directed all U.S. grain operators to improve worker safety in bins citing four fatalities across four separate accidents in the last year. The accidents often occur when workers become trapped in bins in sub-zero weather.

Wireless IDs come in many forms including traditional proximity access control badges, property tags, sensors and parking passes augmented to enable local area wireless capabilities. MicroWireless is characterized by very small, low cost autonomously (battery) powered circuits designed to reliably transmit small messages (e.g. IDs, location, sensor and other critical data) interference free for years. Messages travel locally to a subnet of receivers interconnected to the corporate network that can also directly interface to the existing security, safety, and other legacy systems as desired.

"Wireless IDs have proven to solve a myriad of industrial safety needs from workforce emergency evacuation down to the individual worker environment across various industry sectors," commented [Allan Griebenow](#), President and CEO of Access International. "We have positioned MicroWireless IDs to address the immediate needs of a particular enterprise yet offer the ability to expand their value to other uses all the while utilizing existing security, safety and productivity infrastructures."

About Access International Inc.

Access International Inc. (OTCBB: AXSI) provides intelligent [Wireless Credentials](#) and Wireless IDs for business encompassing local location identification, sensing and control capabilities using its patented MicroWireless™ Technology platform. The complete system solutions supersede existing manual IDs and labels by automating various workforce management tasks that increase productivity, security, safety and business intelligence. MicroWireless – based on active RFID principles – is the economic and technological sweet spot for autonomously-powered low cost, miniature, remote communication devices around the local enterprise. Access is a portfolio company of [Amphion Innovations plc](#) (AIM: AMP). For more information on Access, visit www.accessinc.com.
