

AXCESS Plugs Its Assets

Systems integrators from security, homeland defense, supply chain, enterprise management, bar-coding, and automatic identification industries are struggling with the limitations of passive RFID technology and recognizing the need for the capabilities of Dual-Active RFID(TM).

So says AXCESS International RFID, which is touting its new system for providing "long range and reliable reliable identification, tracking and protection for personnel, assets, and vehicles."

Need more info? AXCESS released a whitepaper called "Dual-Active RFID: Ideal for the Integrator". It lists the characteristics of dual-active RFID systems.

Broad System Integrator Interest Seen in AXCESS Int'l RFID

Driving the growth are integrators from industries such as security, homeland defense, supply chain, enterprise management, bar-coding and automatic identification who are bumping into the limitations of passive RFID technology and recognizing the need for the unique capabilities of Dual-Active RFID(TM). AXCESS' system provides long range and reliable identification, tracking and protection for personnel, assets, and vehicles. Demand is high domestically and around the world including the Latin America, Asia Pacific, and Middle East regions.

"The integrators are tapping into the demand for visibility, efficiency or security from virtually all industry verticals from healthcare to military in countries around the world," said Amy Novotny, managing editor, Business Integration Journal. "Active Radio Frequency Identification (RFID) is a technology that offers the ideal characteristics for integrators to establish, build and protect revenue sources."

"Asset tracking with bar code technology, portables and auto-discovery tools has been proven effective if the items are on the network and don't move around," said Todd Edmundson, president of TVL Corporation, an AXCESS International partner. "With AXCESS RFID, you setup the receivers and low cost control point activators and the assets take care of themselves. The AXCESS solution automatically updates our TVL WiseTrack database, which monitors who has what and where and triggers definable alerts."

AXCESS has released a whitepaper called "Dual-Active RFID: Ideal for the Integrator". It lists the characteristics of dual-active RFID systems which are complementary to the needs of today's high tech systems integrators. It also includes the required skill sets and benefits of having Dual-Active RFID as a solution set. Virtually unlimited options open up for business using the automatic identification capabilities of AXCESS' RFID technology.
